

IN THE CLAIMS:

Please amend the claims as follows:

42. (Amended) A method for treating cancer characterized by overexpression of HER2 receptor in a mammal comprising administering to the mammal subcutaneously a therapeutically effective amount of a formulation comprising an antibody which binds HER2 receptor in an amount of about 50mg/mL to about 400mg/mL.

Please cancel claim 43 without prejudice or disclaimer.

44. (Amended) The method of claim 42 wherein the formulation has been prepared by reconstituting lyophilized antibody in a diluent.
